

is in front of them.

Bats fly and find their prey using echolocation. They call out and listen for an echo. They then figure out what

Can you find the sleeping bat?

Bats sleep during the day by hanging upside down to avoid predators. Shi Leave them alone! if you see them

the day.

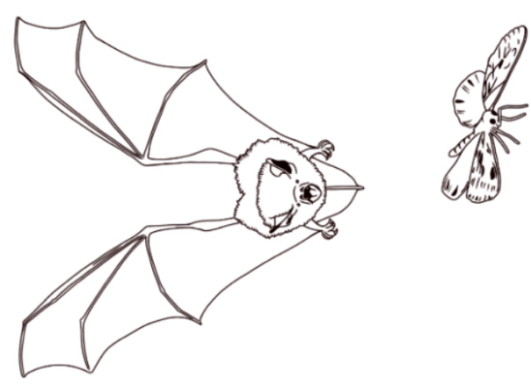

Bats are nocturnal. This means they are awake at night and sleep during

Bats usually sleep in trees, rock, cliffs, or buildings. Only two species regularly use human-made bat boxes. In winter, most of the bats of BC hibernate in caves and deep rock cracks. Two species migrate south to USA and Mexico.

arachnids. None eat fruit or blood.

There are at least 15 species of bats in B.C. They eat insects and

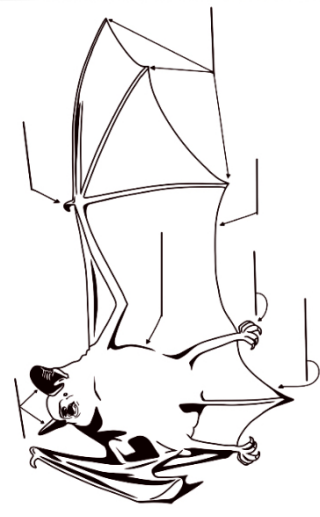

Draw a bat!

Bats are protected under the BC Wildlife Act.
